We're trying to schedule a meeting on another project, and it looks like the only time may be the afternoon of Wednesday 19th at 1:30. So can we make our Portland Harbor HH conference call at 3 pm or later?

- Mike

I am mostly free on the 19th -- tied up from 11:30 to about 1:15. Also if time permits, I can update you on some of the next steps the SHINE program has come up with for Portland Harbor. It is looking like a health assessment for a recreational user scenario is on the horizon followed by health education as needed. We've also discussed doing a consultation and outreach specifically for transients. Your input would be greatly appreciated.
Take care,
Kate

I would like to have a conference call in a few weeks on some of the unresolved human health issues for the PH RA. Both Mike and I can meet on the afternoon of April 19. Does that work for you, Pam and Kate?
After today, I am out of the office until April 18, so if April 19 doesn't work, please let me know what other days/times you are available.

The two topics I would like to discuss on April 19 are breast-feeding and the diver scenario. Please look over Mike Poulsen's write-up of exposure and risk from breast-feeding that are included below as well as the information that Joan Rothlein sent me on divers. I think the methodology for breast-feeding is complete but we need to decide how best to present the results (e.g. as a margin of exposure, as Hazard Quotients, or both) and communicating them. The exposure methodology and exposure factors for the diver scenario have not been developed, so let's try to do that on April 19.

Thanks!!!

Breast-feeding

Portland Harbor, Breast Milk

Here's the latest draft memo on the potential risk from breast feeding pathway. It's now designed as a note to the LWG to direct this portion of the risk assessment. I added a bonus attachment because I don't think anyone adequately explained one of the key equations. It took me awhile to figure out what was going on, so I figured I would save other people the time.

I don't expect that you'll look at this before Wednesday's meeting, and I don't think we necessarily need to talk about the issue this week. Plus, I know Dana would like to have further discussions with the EPA people who have dealt with this issue back east. And I know that ultimately the decision on how to proceed will be made by the EPA project managers. But I'm hoping we can send something like this to the LWG later this month.
